

Power Monitoring and Switching

16A and 32A in-line power meters with optional Relay.

In-Line Power Meter is essential for :-

- Checking how close you are to tripping your circuit breaker
- Ensure sufficient power overhead before adding new equipment to a circuit
- Billing individual clients in co-located services
- Monitoring up to 16 appliances from a single IP address

The power meter goes between the electrical source and the PDU or individual appliance, monitoring the voltage (V), current (A) and Kilowat Hours (kWh) being consumed with billable grade accuracy. Remotely switch devices on and off with optional relay. Relays are Bi-Stable Latched relay, which retains it's state regardless of whether it is receiving power or not.
